

EXCELLENT STAR FORMULAS FOR THE BEGINNER STAR ROLLER

Below is the "Veline Color Star Formula System". It is a good system, because of it's great range of very good colors, using the same basic list of chemicals. These formulas are one of the safer, easier, forgiving formulas to use for rolling round stars. And they are all safe to use with each other.

Also listed are a couple of Gold Glitter formulas that I use all the time, which are also compatible with the Veline formulas.

These are great formulas for the beginner to learn on and eventually advance to more complex formulas as he/she gains in experience.

Good Luck!! Have fun, and be patient! Like I stated earlier--I've been doing this for 40+ years, and still face many challenges when rolling certain stars!
